Digital platforms have made a lot of work less sticky. As work becomes ever more modularised, commoditised and standardised, and as markets for digital work are created, ties between service work and particular places can be disconnected. While the business process of outsourcing that emerged in the 1990s allowed large companies to take advantage of a 'global reserve army' by moving their call centres to cheap and distant labour markets, cloudwork changes the volume and granularity at which geographically non-proximate work can take place. A small business in New York can hire a freelance transcriber in Nairobi one day and New Delhi the next. No offices or factories need to be built, no local regulations are observed, and — in most cases — no local taxes are paid. The switch in the production network of work happens by simply sending some emails or clicking some buttons on a digital work platform. And, in this way, the employer leaves behind no material traces in the places where it was once an employer.

- ① Cloudwork: Breaking the Physical Boundaries of Employment
- ② The Necessity of Building Local Infrastructure for Global Trade
- ③ Why Digital Platforms Require Stricter Local Tax Regulations
- ④ The Evolution of Outsourcing: From Call Centres to Factory Relocation
- ⑤ How Modularised Work Processes Increase Employee Loyalty to Firms

Greenhouse (British "glasshouse," often a misnomer in this plastic age) production is the obvious example of microclimate temperature control. But greenhouse production has its own considerable expertise and literature. Thus, the examples of greenhouse research cited here are included only to illustrate specific situations in which individual control of air and soil temperatures is important.

Even outdoors, although climate (including temperature) is usually regarded as beyond the control of man, localized temperature control is sometimes ① effective on a microclimate scale. Vancouver, Canada, is a few miles north of the 49th parallel, about 60 miles farther north than Minot, North Dakota, with its legendary ② harsh winter temperatures. But constant foehn winds off the Pacific Ocean make Vancouver winters ③ mild and wet, although sunshine is scant. When I had a garden there in the late 1940s, a neighbor used to say that I "cheated God" to bring in my lettuce and tomatoes ④ later than anyone else. The bed in which the vegetables grew was banked toward the south at approximately 50 degrees, and the area between the plants was covered with flat stones, gathered from the nearby beach, to ⑤ maximize soil heating from the weak late winter-early spring sun.

This management was, of course, an extreme example of microclimate modification for crop production. Nevertheless, it was no more than ingenious growers have done to survive inhospitable climates throughout the ages, as with pre-Columbian Andean potato growers. In recent years, the native peoples of the Andean Altiplano have learned to revive the methods of their ancestors, growing potatoes on high narrow beds at the foot of mountain slopes.

All great leaders have charisma because all great leaders start with WHY. It wasn't Bill Gates's passion for computers that inspired us when he led Microsoft, it was his undying optimism that even the most complicated problems could be solved. He believed we could find ways to remove obstacles to ensure that everyone could live and work to their greatest potential. And that belief inspired his vision of a PC on every desk. It wasn't just that Gates saw the impact of WHAT the new technology could do; he also saw WHY we needed it. And that is what drew us to him.

Energy can always be injected into an organization to motivate people to do things. Bonuses, promotions, other carrots, and even a few sticks can get people to work harder, for sure, but the gains are, like all manipulations, short-term. Over time, such tactics cost more money and increase stress for employee and employer alike, and eventually will become the main reason people show up for work every day. That's not loyalty. That's the employee version of repeat business. Loyalty among employees is when they turn down more money or benefits to continue working at the same company. Loyalty to a company trumps pay and benefits. And unless you're an astronaut, it's not the work we do that inspires us either. It's the cause that we come to work for. We don't want to come to work to build a wall; we want to come to work to build a cathedral.

When a WHY is clear, those who share that belief will be drawn to it and maybe want to take part in bringing it to life. And as a belief amplifies, it can have the power to rally even more believers to raise their hands and declare, "I want to help." With a group of believers all rallying around a common purpose, cause or belief, amazing things can happen. But it takes more than inspiration to become great. Inspiration only starts the process; you need something more to drive a movement.

* tactic: 책략, 전술 ** trump: 능가하다 *** cathedral: 대성당

[지문출처: Start With Why : How Great Leaders Inspire Everyone To Take Action (Simon Sinek)]

- ① External incentives such as bonuses and promotions lead to sustainable, long-term improvements in performance.
- ② Manipulative tactics like carrots and sticks can eventually become the primary reason for employees to work.
- ③ True employee loyalty is demonstrated when workers refuse higher pay from other companies to stay at their current one.
- ④ For most people, the specific nature of the work itself is less inspiring than the underlying purpose they are working for.
- ⑤ The author uses the metaphor of "building a cathedral" to represent working for a significant and inspiring cause.

4. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?

Loewen's message is quite clear. As American history is now taught in high schools, the past and present are disconnected, such that history has no effect on, or relevance to, our day-to-day lives. Yet that conclusion is so untrue, especially for the history of life, so ancient it is written in rocks, molecules, models, and on the DNA strands found within our every cell. Its relevance is that it gives us place and context. The history of life also just might save us from near-term extinction, if we take note of it and heed its warnings.

In the early 1960s the great American writer James Baldwin wrote: "People are trapped in history, and history is trapped in them." He was speaking to race when he penned those words. But the statement is equally true if the word "people" is replaced with "all of life on Earth, present and past," for each strand of DNA, in each of our cells, is an ancient record of biological history, written in simple code and passed down from generation to generation. One could say that DNA is nothing but history, one with a physical manifestation that was slowly ① blended and accumulated over countless eons by the most pitiless of all phenomena — natural selection. DNA is a history that is inside us — and yet one that is our master as well, the blueprint for our bodies, and ② dictator of what we will pass on to our children, gifts that can be blessings — or ③ deadly time bombs. We are indeed ④ liberated in this particular vehicle of history as much as it is ⑤ trapped in us.

The history of life gives us the answers to so many of the perplexing questions confronting us all: How did we humans come to inhabit this thin, late-occurring, and very marginal twig on the giant tree of life? What wars did our species have to pass through? What calamities mark the human branch of life's 4- billion-year-old tree? The past can help us understand our place among the twenty or more million species now living-and the untold billions now extinct. When a species is no longer extant, what is also destroyed is the as yet unrealized future evolution of untold species.

5. 비판적 사고(Critical Thinking)에 관한 다음 글의 내용과 일치하지 않는 것은?

People may not think critically for a variety of reasons, such as laziness and inability, but fear is a big one. Why is that? People don't want to think not just because it's hard, but also because they're afraid it will make them question their long-held beliefs. Your students most likely do want to think about things that can be very controversial, like politics, ethics, and philosophy. But probe even deeper. Once we start thinking deeply, long-held assumptions are challenged. Thought makes us worry that we'll lose our balance and have to look at the world in a different way. We worry about thinking because we care about what we and other people think. Even the most far-fetched ideas have an effect on the world. Non-Euclidean geometry and symbolic logic are about as abstract as thinking can get, but you can't understand Einsteinian gravity without the first and run computers without the second. Thinking is important to us, to others, and to the world we live in. This is one reason why we are so afraid of it : it shakes us to the core.

But not any kind of thought will do. If we really care about the truth, we will think carefully, using the best reason and evidence we can find. A big

part of our dignity depends on how well we think. Thomas Jefferson said, "This organization will be based on the freedom of the mind, which has no limits. Because here, we don't mind following the truth wherever it takes us, and we're willing to put up with any mistake as long as reason is free to fight it."

* probe: (면밀히) 조사하다. ** far-fetched : 억지스러운 *** non-Euclidean geometry: 비(非)유클리드 기하학

[지문출처: Never Stop Asking : Teaching Students to Be Better Critical Thinkers (Nathan D. Lang-Raad)]

- ① Fear serves as a major obstacle that prevents individuals from engaging in critical thinking.
- ② People often avoid deep thinking because they are reluctant to challenge their existing beliefs.
- ③ Students generally show a lack of interest in exploring controversial topics such as ethics and philosophy.
- ④ Abstract concepts like symbolic logic have practical significance, such as making computers functional.
- ⑤ The anxiety associated with thinking comes from the possibility of having to adopt a new perspective on the world.

6. 다음 빈칸에 들어갈 말로 가장 적절한 것은?

- ① force us to abandon our intellectual achievements and start from scratch
- ② make us reconsider our most fundamental beliefs and perspectives
- ③ cause us to physically lose our balance and sense of direction
- ④ make us feel something very strange about our daily life
- ⑤ help us understand complex theories while making our existing knowledge completely useless

정답 및 해설

1) [정답] ①

[해설] 지문은 디지털 플랫폼과 클라우드 워크(cloudwork)로 인해 일의 '점착성(stickiness)'이 사라지고, 물리적 장소와 고용 사이의 연결이 끊어지는 현상을 다룬다.

2) [정답] ④

[해설] 필자가 돌을 깔고 남향으로 경사를 만든 이유는 토양의 가열을 극대화하여 작물을 더 빨리 키우기 위함이다. 문맥상 "신을 속였다"는 표현은 자연적인 기후 조건보다 앞서 결과물을 얻었음을 의미하므로, later(더 늦게)가 아니라 earlier(더 일찍)가 되어야 적절하다.

3) [정답] ①

[해설] 지문의 두 번째 문장에서 보너스나 승진 같은 보상(carrots)을 통한 이득은 모든 조작(manipulations)이 그러하듯 '단기적(short-term)'이라고 명시하고 있으므로 이를 '지속 가능하고 장기적인 개선(sustainable, long-term improvements)'이라고 설명한 ①번 선지는 지문의 내용과 일치하지 않는다.

4) [정답] ④

[해설] 지문의 마지막 문장은 "We are indeed trapped in this particular vehicle of history as much as it is trapped in us."이다. 빈칸 ④번 문맥을 보면, 앞서 언급된 '역사에 갇힌 사람'과 '사람 안에 갇힌 역사'의 상호 의존성을 결론짓고 있으므로 '자유로워진(liberated)'이 아니라 '갇힌(trapped)'이 적절하다.

5) [정답] ③

[해설] 지문 중반부에서 "Your students most likely do want to think about things that can be very controversial(당신의 학생들은 정치, 윤리, 철학처럼 매우 논쟁적일 수 있는 것들에 대해 아마도 정말 생각하고 싶어 할 것이다)"라고 명시하고 있다. 따라서 학생들이 이러한 주제에 관심을 보이지 않는다는 ③번 선지는 지문의 내용과 일치하지 않는다.

6) [정답] ②

[해설] 지문의 마지막 문장은 디지털 플랫폼 고용의 결론부이다. 앞에서 사무실을 짓지 않고(No offices), 세금도 내지 않으며(no taxes), 이메일 클릭만으로 고용이 일어난다고 설명했다. 따라서 고용주가 해당 장소에 '어떠한 물리적 흔적도 남기지 않는다'는 내용이 가장 적절하다.

7) [정답] ③

[해설] 첫 문장에서 미세기후 단위의 국지적 온도 조절이 효과적일 수 있음을 명시하고, 이후 필자의 경험(남향 경사, 돌 배치)을 통해 실제 조기 수확을 이룬 사례를 제시하고 있다.

8) [정답] ②

[해설] 지문 후반부에서 우리가 일하러 오는 이유는 'cause(대의/명분)'이며, 단순한 'wall(단순 노동)'이 아닌 'cathedral(가치 있는 목표)'을 위해 일하고 싶어 한다는 맥락에 적절하다.

9) [정답] ②

[해설] 필자는 James Baldwin의 말을 인용하여 '역사가 우리 안에 갇혀 있고, 우리가 역사 안에 갇혀 있다'는 통찰을 생물학적 DNA로 확장한다. DNA는 단순히 과거의 생물학적 기록일 뿐만 아니라, 우리의 신체를 설계하고 미래 세대에게 유전될 정보를 결정하는 '지배자'이자 '청사진' 역할을 함. 따라서 DNA가 과거의 기록임과 동시에 현재와 미래의 우리를 규정하는 생물학적 실체임을 설명하는 ②번이 가장 적절하다.

10) [정답] ④

[해설] 해당 문장은 비유클리드 기하학이나 기호 논리학이 사고의 영역에서 얼마나 '추상적인(abstract)' 상태인가를 설명한다. 이후 문장에서 이들이 현실 세계의 컴퓨터나 중력 법칙을 이해하는 데 필수적이라고 했으므로, 실체화된(concrete)이 아니라 이론적이고 추상적인(abstract)이 문맥상 적절하다.

11) [정답] ⑤

[해설] ⑤ it(주어) + was(동사) + an employer(보어)로 문장 성분이 모두 갖춰진 완전한 문장이다. 따라서 선행사 the places를 수식하기 위해서는 관계대명사 which가 아닌 관계부사 where 혹은 in which가 와야 한다.

12) [정답] ③

[해설] 빈칸 앞의 'flat stones(평평한 돌)'의 역할을 추론하는 문제이다. 돌은 열을 흡수하고 유지하는 성질이 있으며, 문맥상 약한 겨울 햇살을 이용해 작물을 빨리 키우려는 목적과 연결되어야 한다.

13) [정답] ⑤

[해설] it ~ that 강조구문에서 강조 대상이 'the work we do'인 명사구이므로 접속사 what은 쓸 수 없으며, that 혹은 관계대명사 which가 적절하다.

14) [정답] ②

[해설] 빈칸은 글 전체의 결론부에 위치함. 앞선 내용에서 DNA가 과거의 역사를 담고 있으면서

(history is trapped in us), 동시에 우리를 설계하고 다음 세대로 전달되는 정보를 결정(we are trapped in history)한다는 논리를 펼치고 있음. 따라서 Baldwin의 인용구를 다시 생물학적 맥락으로 가져와 마무리하는 ②가 가장 적절하다.

15) [정답] ②

[해설] 'it shakes us to the core'는 '우리의 핵심을 뒤흔들다'는 뜻이다. 지문의 맥락에서 비판적 사고는 단순히 생각을 바꾸는 수준이 아니라, 우리가 당연하게 여겼던 삶의 토대나 오랫동안 고수해온 믿음을 위협한다. 즉, 기존의 신념 체계를 근본부터 다시 생각하게 만드는 상황을 의미하므로 ②번이 정답이다.
