

1. 다음 글의 주제로 가장 적절한 것은?

The early grain trade firms were active in both surplus-producing and food deficit regions, and these firms made it their business to know the state of supply and demand in both. Because this information was the key to their profitability, these firms worked in relative secrecy, frequently built on family ties, trust, and loyalty. In addition, these firms were able to benefit from the rise of commodity exchanges and commodities futures markets that emerged in the mid-1800s. Agricultural markets are naturally unstable, due to changes in harvest size that result from variable weather patterns and other factors. Locking-in prices by buying and selling grain for future delivery helped these firms to minimize such risks. It made sense for the grain trading companies to manage their risks within a single firm that was operating in more than one country, rather than operating as independent national companies trading with each other. Their access to information in multiple markets enabled them to easily cover the risks associated with agricultural commodity trade.

* deficit: 부족

- ① roles of family ties and loyalty in early agricultural commodity markets
- ② effects of unstable weather conditions on the decline of grain trade firms
- ③ ethical issues of monopolizing market information in global grain trading
- ④ strategies of early grain trade firms for profitability and risk reduction
- ⑤ necessity of operating as independent national companies in the grain trade

2. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

The four terrestrial elements are themselves material causes, while the motion of the continually moving bodies in the celestial sphere is the efficient cause of some terrestrial events. In other words, there is interaction between the

regions, and the celestial region can affect the terrestrial. The motion of the aither causes material in the terrestrial realm to be heated. For example, rain is due to the efficient cause of the Sun's motion as it gets closer to or more distant from the Earth, and the subsequent processes of evaporation and condensation.

In the Physics, Aristotle asks whether nature acts for the sake of something. He offers an account of rain as water that rises when heated by the Sun, then cools, condenses, and falls to Earth, but is not particularly concerned with explaining rain as such. Rather, he addresses a more general question: how to account for natural objects, events, and processes that appear with regularity. He queries whether the sharpness of front teeth and the bluntness of molars is coincidental and rejects that possibility, because this arrangement occurs with regularity and that regularity is linked to purposefulness. The sharpness of front teeth allows them to tear while the bluntness of those in the back enables them to crush food; both are useful for eating. In Aristotle's view, all natural things happen in a given way and occur for the sake of something; that is the final cause.

He emphasizes the teleology of nature, its goal-directedness; this concern with final causes is a signature feature of his natural philosophy.

3. 밑줄 친 creating possibilities without judgment가 다음 글에서 의미하는 바로 가장 적절한 것은?

Creativity depends on quantity of ideas, a temporary suspension of judgment, a willingness to experiment with different combinations, and most importantly, a failure to recognize (or worry about) similarity with previous ideas-all things AI can do perhaps more easily than humans. Biologist E. O. Wilson (2017) argued that creativity was the defining trait of our species, but AI is opening new paths to unique ideas and key human challenges. AI is going to make us all more creative.

AI is a prolific idea generator. Human brainstorming groups tend to focus on the quality of creative ideas and almost immediately lean into variations of first suggestions, but good ideas are more likely when groups focus first on quantity. As Linus Pauling put it, "The best way to have a good idea is to have lots of ideas." Psychologist Dean Keith Simonton called this the "equal odds rule" arguing that creative success is correlated to the total number of works created. Many studies have confirmed that creative quality comes from quantity of ideas (what Bob Sutton at a design and innovation consulting company called "idea ratio"), and one Stanford study pegged the number of ideas that distinguish a successful product from a failure at more than two thousand. This is why design thinking and innovation are so focused on the processes (what Utley and Klebahn call "idea flow") of creating possibilities without judgment.

Creativity relies on the quantity of different and divergent ideas. Variations of single ideas are initially less valuable. Both humans and AIs generate new ideas by trying new combinations, but AI can do this at significantly greater speed and quantity. AI is equally happy proposing ten, a hundred, or a hundred thousand new ideas, titles, or products.

* prolific: 많이 만들어 내는, 다작의 ** peg: 못박다

[지문출처: Teaching with AI : A Practical Guide to a New Era of Human Learning (José Antonio Bowen, C. Edward Watson)]

- ① producing a massive volume of creative ideas without evaluating them prematurely
- ② evaluating the very first suggestions thoroughly before generating any further ideas
- ③ relying entirely on artificial intelligence to filter out bad ideas immediately
- ④ limiting human brainstorming groups to only polishing the initial creative suggestions
- ⑤ judging the creative success of a product based solely on its final quality

The first is that reappraisal works best for those who are interoceptively aware: we have to be able to identify our internal sensations, after all, before we can begin to modify the way we think about them. Second, the sensations we're actually feeling have to be congruent with the emotion we're aiming to construct. We're able to reappraise nervousness as excitement because the physiological cues associated with the two emotions are so similar; if what we're feeling is a heavy sense of apathy or lassitude, exclaiming "I'm so excited!" isn't going to work.

Becoming aware of our internal sensations can help us ① handle our own emotions. Perhaps more surprisingly, the body's interoceptive faculty can also bring us into closer contact with other people's emotions. That's because the brain, on its own, has no direct access to the contents of other people's minds, no way to feel ② that others are feeling. Interpreting others' spoken words and facial expressions may yield only a coolly abstract sense of the emotions that stir within. The body acts as a critical conduit, ③ supplying the brain with the visceral information it lacks. It does so in this way: When interacting with other people, we subtly and unconsciously mimic their facial expressions, gestures, posture, and vocal pitch. Then, via the interoception of our own bodies' signals, we perceive ④ what the other person is feeling because we feel it in ourselves. We bring other people's feelings onboard, and the body is the bridge. In an act similar to ⑤ taking a bite off our partner's plate, or borrowing an earbud to hear the song our friend is listening to, we are sampling their emotions.

When people can't engage in such mimicking, they have a harder time figuring out what others are feeling. A striking example: people injected with the wrinkle reducer Botox, which works by inducing mild paralysis of the muscles used to generate facial expressions, are less accurate in their perceptions of others' emotions — presumably because they can't simulate others' feelings within themselves.

5. 다음 글에서 필자가 주장하는 바로 가장 적절한 것은?

The strongest criticisms of the overextension of technology involve claims of dehumanization, and these arguments are not new. Canadian philosopher of the electronic age, Marshall McLuhan was primarily a techno-utopian, but he was also a critical thinker, who cautioned decades ago against too much human extension into technology. McLuhan famously claimed that every media extension of man is an amputation. For example, once we have a car, we don't walk to the shops any more; once we have a computer hard-drive, we don't have to remember things; and now that we have personal GPS (Global Positioning System) on our cell phones, no one can find their way about without it. Based on McLuhan's philosophy, we are becoming post-literate because we rely on screens full of pictures, rather than print media, such as books. It is thus possible that extensions of human faculties, through techno- and bio-enhancement, will bring about arrested development in the natural evolution of higher human faculties.

Lewis Mumford's critique of the dangers of too much technological extension was grounded in his organic humanism. As part of this approach Mumford considered that the space exploration of his era was a form of technological exhibitionism. I wonder what he would think of Kurzweil's plans to colonize Mars, and Reese's vision to launch terra-forming nanites into space? But perhaps these nanites will meet a swarm of surveillance cyborg insects on their travels. In his book Values for Survival (1946) Mumford made his humanistic priorities clear.

정답 및 해설

1) [정답] ④

[해설] 초기 곡물 무역 회사들은 잉여 생산 지역과 식량 부족 지역 양쪽에서 활동하며 수요와 공급 정보를 비밀리에 관리하여 수익성을 확보했고, 1800년대 중반에 등장한 상품 거래소와 선물 시장을 활용하여 가격을 고정함으로써 농산물 시장의 불안정성에 따른 위험을 최소화했다는 내용의 글이다. 따라서 글의 주제로 가장 적절한 것은 ④ '초기 곡물 무역 회사들의 수익성 확보 및 위험 감소 전략'이다. ① 초기 농산물 시장에서 가족 유대와 충성의 역할 ② 불안정한 기상 조건이 곡물 무역 회사의 쇠퇴에 미친 영향 ③ 세계 곡물 무역에서 시장 정보 독점의 윤리적 문제 ⑤ 곡물 무역에서 독립적인 국내 회사로 운영할 필요성

2) [정답] ④

[해설] 아리스토텔레스는 자연이 특정한 목적을 위해 작용하는지를 탐구하면서, 앞니의 날카로움과 어금니의 뭉툭함이 우연이 아니라 규칙적으로(regularity) 나타나며, 이러한 규칙성이 목적성과 연결된다고 주장했다. 자연의 모든 것은 정해진 방식으로 일어나며 특정한 목적(purpose)을 위해 발생한다는 것이 그의 목적론적 자연 철학의 핵심이라는 내용의 글이다. 따라서 요약문의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은 ④ 'regularity - purpose'이다. ① 예측 불가능성 - 제약 ② 규칙성 - 한계 ③ 예측 불가능성 - 기능 ⑤ 복잡성 - 환상

3) [정답] ①

[해설] 인간 브레인스토밍 그룹은 처음 제안의 변형에 곧바로 치우치는 경향이 있지만, 좋은 아이디어는 양에 먼저 집중할 때 나오며, 창의적 질은 아이디어의 양에서 비롯된다는 맥락에서, 디자인 사고와 혁신이 판단 없이 가능성을 만들어 내는 과정에 집중한다는 의미이다. 따라서 밑줄 친 부분이 글에서 의미하는 바로 가장 적절한 것은 ① '성급하게 평가하지 않으면서 대량의 창의적 아이디어를 생산하기'이다. ② 추가 아이디어를 생성하기 전에 첫 번째 제안을 철저히 평가하기 ③ 나쁜 아이디어를 즉시 걸러내기 위해 전적으로 인공지능에 의존하기 ④ 인간 브레인스토밍 그룹을 초기 창의적 제안만 다듬는 것으로 제한하기 ⑤ 최종 품질에만 근거하여 제품의 창의적 성공을 판단하기

4) [정답] ②

[해설] 뇌가 독자적으로 타인이 느끼는 것을 느낄 방법이 없다는 의미에서, feel 뒤에는 타인이 '무엇

을' 느끼고 있는지를 나타내는 의문 대명사 what이 와야 한다. that은 명사절을 이끄는 접속사로 '~라는 것'의 의미이므로 문맥상 적절하지 않다. 따라서 that을 what으로 고쳐 써야 한다.

5) [정답] ⑤

[해설] 기술의 과도한 확장에 대한 가장 강력한 비판이 비인간화에 관한 것이며, Marshall McLuhan이 모든 미디어의 인간 확장은 절단이라고 주장했다는 점을 설명하고 있다. 자동차가 있으면 걸어가지 않고, 하드 드라이브가 있으면 기억하지 않으며, GPS가 있으면 스스로 길을 찾지 못하는 예시를 통해 기술과 생명 공학적 향상을 통한 인간 능력의 확장이 오히려 인간 고유의 고등 능력의 자연적 진화를 저해할 수 있다는 내용의 글이다. 따라서 필자가 주장하는 바로 가장 적절한 것은 ⑤이다.

6) [정답] ④

[해설] 주어진 문장은 미래 인도를 위해 곡물을 사고 팔아 가격을 고정함으로써 이러한 위험을 최소화하는 데 도움이 되었다는 내용이므로, 앞에는 '이러한 위험(such risks)'이 가리키는 내용, 즉 농산물 시장이 변동하는 날씨 패턴과 기타 요인에 의한 수확량 변화로 본질적으로 불안정하다는 내용이 와야 하고, 뒤에는 위험을 관리하기 위해 단일 회사 내에서 여러 국가에 걸쳐 운영하는 것이 합리적이었다는 내용이 이어져야 한다. 따라서 주어진 문장이 들어가기에 가장 적절한 곳은 ④이다.

7) [정답] ②

[해설] 글에서 아리스토텔레스는 태양열로 물이 증발하고 냉각되어 비가 내리는 과정을 설명하긴 했지만, 비 자체를 설명하는 데 특별히 관심을 두지 않았다(is not particularly concerned with explaining rain as such)고 했으므로, 비가 내리는 과정 그 자체를 설명하는 데 주력했다는 ②는 글의 내용과 일치하지 않는다.

8) [정답] ③

[해설] 심리학자 Dean Keith Simonton이 '균등 확률 법칙'이라 부른 것은 창의적 성공이 생성된 작품의 총 수와 상관관계가 있다는 주장이며, 많은 연구들이 창의적 질이 아이디어의 양에서 나온다고 확인했다는 문맥이므로, ③의 unrelated(관련 없는)는 문맥상 적절하지 않으며 correlated(상관관계가 있는)와 같은 낱말로 바뀌어야 한다.

9) [정답] ③

[해설] 신체가 타인의 감정을 느끼게 해 주는 핵심적인 전달자이며, 무의식적 모방과 내부 감각을 통해 타인의 감정을 우리 자신 안에서 느끼게 된다

는 내용의 글이다. 따라서 직장에서 감정적 경계를 유지하기 위해 이러한 무의식적 신체 반응을 통제하는 것이 매우 권장된다는 내용의 ③은 글의 전체 흐름과 관계가 없다.

10) [정답] ⑤

[해설] McLuhan은 기술을 통한 인간의 확장이 오히려 인간의 자연적 능력을 잃게 만든다고 경고했으며, 자동차가 걷기를, 하드드라이브가 기억력을, GPS가 방향 감각을 대체하는 구체적 예시를 통해 이를 뒷받침하고 있다. 따라서 밑줄 친 부분이 글에서 의미하는 바로 가장 적절한 것은 ⑤ '기술적 도구는 결국 우리의 타고난 인간 능력의 상실을 초래한다'이다. ① 시각 매체가 전통적인 책보다 더 정확한 공간 정보를 제공한다 ② 디지털 미디어에 의존하는 것이 신체적·정신적 한계를 확장하는 데 도움이 된다 ③ 전자 시대의 사람들은 신체적 퇴화를 경험할 운명이다 ④ 첨단 기기가 인류로 하여금 자연적 진화의 한계를 극복하게 해 준다

11) [정답] ④

[해설] 곡물 무역 회사가 둘 이상의 국가에서 운영되는 단일 회사 내에서 위험을 관리하는 것이 합리적이었다는 문맥에서, 서로 거래하는 독립적인(independent) 국내 회사들로 운영하는 것이 아닌 방식을 택했다는 내용이므로, ④의 dependent(의존적인)는 문맥상 적절하지 않으며 independent와 같은 낱말로 바꿔야 한다.

12) [정답] ④

[해설] 자연이 특정한 목적을 위해 작용하는지 묻는 주어진 글 다음에는, 태양열에 의해 물이 증발하고 냉각되어 비가 내리는 과정을 설명하지만 비 자체보다는 자연의 사물과 과정이 규칙적으로 나타나는 현상을 설명하는 더 일반적인 질문을 다룬다는 내용의 (C)가 이어져야 한다. (C) 다음에는 규칙성의 구체적 예시로 앞니의 날카로움과 어금니의 뭉툭함이 우연인지 의문을 제기하고 그 가능성을 부정하는 내용의 (A)가 오고, 이어서 앞니와 어금니의 기능적 유용성을 설명하며 자연의 모든 것이 목적을 위해 발생한다는 최종 원인의 결론을 내리는 내용의 (B)가 이어져야 한다. 따라서 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은 ④이다.

13) [정답] ⑤

[해설] AI는 다작의 아이디어 생성기이며, 인간 브레인스토밍 그룹은 창의적 아이디어의 질에 집중하는 경향이 있지만 좋은 아이디어는 먼저 양에 집중할 때 나올 가능성이 높다는 점을 설명하고 있다. 창의적 성공이 생성된 작품의 총 수와 상관관계가 있다는 '균등 확률 법칙'과 성공적인 제품

을 구별하는 아이디어 수가 2천 개 이상이라는 연구 결과를 근거로 제시하고 있는 글이다. 따라서 글의 요지로 가장 적절한 것은 ⑤이다.

14) [정답] ①

[해설] 내부 감각을 인식하는 것이 자신의 감정을 다루는 데 도움이 될 뿐만 아니라, 뇌가 독자적으로는 타인의 마음에 직접 접근할 수 없기 때문에 신체가 핵심적인 전달자 역할을 한다는 점을 설명하고 있다. 다른 사람과 상호작용할 때 무의식적으로 표정, 몸짓, 자세 등을 모방하고, 자신의 신체 신호에 대한 내부 감각을 통해 타인의 감정을 느끼게 되며, 신체가 그 다리 역할을 한다는 내용의 글이다. 따라서 글의 제목으로 가장 적절한 것은 ① '다리로서의 신체: 우리가 타인의 감정을 느끼는 방법'이다. ② 내부 감각을 억누르는 것이 감정을 통제하는 방법 ③ 대중 연설 기술에서 표정의 역할 ④ 타인의 마음을 이해하기 위한 말의 해석 ⑤ 우리의 뇌가 신체 신호 없이 완벽하게 기능하는 이유

15) [정답] ①

[해설] Marshall McLuhan은 기술을 통한 인간 능력의 과도한 확장(expansion)이 역설적으로 인간 고유의 고등 능력의 퇴화(deterioration)를 초래할 수 있다고 경고했다는 내용의 글이다. 자동차, 하드드라이브, GPS 등의 기술이 걷기, 기억하기, 길 찾기 같은 인간의 자연적 능력을 대체하면서 그 능력이 약화된다는 점을 구체적 예시로 제시하고 있다. 따라서 요약문의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은 ① 'expansion - deterioration'이다. ② 통합 - 보존 ③ 제한 - 진화 ④ 수정 - 정교화 ⑤ 제약 - 손상
