We feel busy as we handle all the information coming our way; sending and receiving emails while simultaneously attending a meeting. We switch (seemingly) seamlessly between private information on chats and social media and work documents and communication. At 5pm, we are exhausted from having spent the whole day busying ourselves, but many are unsure of just what they have accomplished. This feeling of busyness should not be mistaken for productivity. Not only can it be stressful operating in a constantly busy state, but research also shows it takes its toll on our productivity.

Deep work is when you perform an activity with deep concentration that pushes your cognitive capabilities, and by doing so create new value and improve your skills. These efforts are hard to replicate; and to be able to do deep work, we need a distraction-free environment. For many people though, we spend far too much time on the other end of the scale, doing what is referred to as shallow work. This style of working is not cognitively demanding but is rather an execution of logical-type tasks that rarely create new value (although they may still be important). We often perform these tasks while we are distracted. Shallow work has its place, both because routine-type tasks need to be done and because we cannot spend our entire time doing deep work. The problem with too much shallow work is that we feel busy, maybe even stressed, but we rarely see any output reflecting our experienced effort.

The two core symptoms of depression are low mood and anhedonia. This word, unfamiliar to most, conveys such an important experience: an inability to feel pleasure from things that you usually enjoy: hobbies, food, sex, and so on. The world becomes a futureless, hopeless shade of grey. Alongside these core symptoms, other common symptoms take hold on the body: fatigue, slowness of movement and mind, insomnia, hypersomnia (sleeping too much), weight loss or gain, feeling guilty or worthless, impaired concentration, and thoughts of suicide.

Depression is terrible, and it is common. Roughly one in seven people will experience at least one full-blown depressive episode in their lifetime. It is a tragedy on an individual and a societal level, yet we — and by we, I mean all of us, including doctors — struggle to grasp it. This is because depression is not one disease; it is a collection of symptoms that appears similar across sufferers, despite resulting from a melting pot of diverse causes and mechanisms. ① There is no single reason for depression: one person's depressive episode seems to clearly stem from recent life events, another from historic trauma and loss, yet another out of the blue, with no clear psychological or social cause whatsoever. ② Research suggests that early detection of these diverse symptoms can significantly reduce the overall cost of long-term medical treatment for the society. ③ There is also no one presentation of depression: in fact, there are 227 possible symptom combinations that meet the diagnostic criteria for major depressive disorder. ④ Perhaps understandably, there is no one treatment for this condition, either. ⑤ Antidepressants lead to improvement in roughly a third of patients, offer some kind of improvement in another third, while a final third remain completely unaffected.

There are similar findings with psychological interventions. This is not to mention the withdrawal symptoms and side effects associated with antidepressant medications. I have seen the near miraculous effects of antidepressants on some individuals, but there is little way of knowing in advance who will benefit, and many well-meaning clinicians end up giving individuals a treatment that makes their life significantly worse.

Analogies can serve two different functions in philosophy. Sometimes, as seems often the case in Plato, for example, they serve simply to illustrate. When Socrates compares the Good with the sun, he may simply be using the image of the sun to help bring to life his arguments about the Good. On other occasions, however, the analogy can be an integral part of an argument. Consider one of the most popular arguments for the existence of God, the 'argument from design', which has been advanced by many thinkers, from the ancient Stoics to British theologian William Paley. The argument holds that just as an artefact such as a watch implies the existence of an artisan, so the universe implies the existence of a divine creator. Here the analogy with the watch is not meant simply to illustrate a point. Rather, the analogy is supposed to show why we should conclude that the universe has a creator.

What is clear in the light of increasing demands in both work and sport as well as compromised time for rest, is that recovery has become increasingly important. Recovery is generally defined as a physiological and psychological restorative process relative to time (Kellmann et al., 2018). So, both physiological and psychological recovery are needed to achieve complete recovery.

Recovery can be considered a process as well as an outcome. Recovery as an outcome refers to one's physiological and psychological state after a certain recovery period, which can be, for instance, at the end of the day, after engaging in a certain activity, or after waking up. Physiological recovery outcomes involve the restoration of physiological resources such as muscle strength, heart rate, and the absence of physical fatigue (e.g., muscle soreness, heavy arms and legs). Psychological recovery outcomes relate to the restoration of mental resources such as attention, motivation, mental energy, and mood. ① As such, one's physiological and psychological states act as a resource that functions as a stress-buffer for upcoming activities as well. ② Therefore, employers should focus on providing financial incentives to workers who exhibit high levels of mental energy during work hours. ③ Recovery as a process refers to those activities and experiences that result in a change in one's physiological and psychological state. ④ Accordingly, recovery processes precede recovery outcomes and, consequently, determine whether adequate recovery is obtained. ⑤ Regarding recovery processes, physical inactivity is generally considered the most effective way to restore physiological resources.

However, ceasing physical activity does not guarantee a cessation of mental activity (Eccles & Kazmier, 2019). It turns out that the psychological recovery process is somewhat more complex than the physiological recovery process.

These people had become more resilient; they had learned to cope with adversity and that enabled them to better confront their new hardships. This research (which is also supported by other findings) identified that some degree of trauma helps people to build resiliency and grow from their misfortunes and better prepares them to face the future hardships of life. Our suffering doesn't only help to bolster a sense of resiliency in us.

The difficult times that we endure play a key role in helping us to lead more meaningful lives. As Jean-Paul Sartre put it, "Human life begins on the far side of despair." That is, many of the ways people feel their lives are meaningful are grounded in the sufferings they have experienced. One research project investigated the differences between people who found their lives to be happy and those who found them to be meaningful. While, on average, happy lives and meaningful lives overlap a great deal, the researchers focused on those aspects of a meaningful life that were distinct from happiness. And, remarkably, they found that people who had more meaningful lives reported that they had more experience suffering through past negative events. They also reported worrying more and enduring more things that caused them stress. On the other hand, these past experiences with suffering tended to reduce people's overall levels of happiness. Our sufferings, then, seem to help to provide people with the sense that their lives are more meaningful, even if these events are associated with lower feelings of happiness.

We can also see evidence of the relation between suffering and a meaningful life in another intriguing research finding. If you look around the world to identify where people are more likely to be leading meaningful lives, you don't tend to find many of them in places where people's basic needs are easily satisfied; rather, people who are leading meaningful lives are more common in places where life is harder. On average, the poorer a country is, the more likely its citizens will report that their lives are meaningful.

Perhaps understandably, there is no one treatment for this condition, either. Antidepressants lead to improvement in roughly a third of patients, offer some kind of improvement in another third, while a final third remain completely unaffected.

There are similar findings with psychological interventions. This is not to mention the withdrawal symptoms and side effects associated with antidepressant medications. I have seen the near miraculous effects of antidepressants on some individuals, but there is little way of knowing in advance who will benefit, and many well-meaning clinicians end up giving individuals a treatment that makes their life significantly worse.

Analogies can serve two different functions in philosophy. Sometimes, as seems often the case in Plato, for example, they serve simply to illustrate. When Socrates compares the Good with the sun, he may simply be using the image of the sun to help bring to life his arguments about the Good. On other occasions, however, -----

Consider one of the most popular arguments for the existence of God, the 'argument from design', which has been advanced by many thinkers, from the ancient Stoics to British theologian William Paley. The argument holds that just as an artefact such as a watch implies the existence of an artisan, so the universe implies the existence of a divine creator. Here the analogy with the watch is not meant simply to illustrate a point. Rather, the analogy is supposed to show why we should conclude that the universe has a creator.

- ① the analogy can be an integral part of an argument
- ② the image of the sun is used to simplify the argument
- ③ philosophical analogies are often misunderstood by thinkers
- ④ the role of analogies is limited to a decorative function
- ⑤ scientists rely on analogies more than philosophers do

What is clear in the light of increasing demands in both work and sport as well as compromised time for rest, is that recovery has become increasingly important. Recovery is generally defined as a physiological and psychological restorative process relative to time (Kellmann et al., 2018). So, both physiological and psychological recovery are needed to achieve complete recovery.

Recovery can be considered a process as well as an outcome. Recovery as an outcome refers to one's physiological and psychological state after a certain recovery period, which can be, for instance, at the end of the day, after engaging in a certain activity, or after waking up. Physiological recovery outcomes involve the ① restoration of physiological resources such as muscle strength, heart rate, and the ② absence of physical fatigue (e.g., muscle soreness, heavy arms and legs). Psychological recovery outcomes relate to the restoration of mental resources such as attention, motivation, mental energy, and mood. As such, one's physiological and psychological states act as a resource that functions as a stress-buffer for ③ upcoming activities as well. Recovery as a process refers to those activities and experiences that result in a change in one's physiological and psychological state. Accordingly, recovery processes ④ follow recovery outcomes and, consequently, determine whether adequate recovery is obtained. Regarding recovery processes, physical inactivity is generally considered the most ⑤ effective way to restore physiological resources.

However, ceasing physical activity does not guarantee a cessation of mental activity (Eccles & Kazmier, 2019). It turns out that the psychological recovery process is somewhat more complex than the physiological recovery process.

These people had become more resilient; they had learned to cope with adversity and that enabled them to better confront their new hardships. This research (which is also supported by other findings) identified that some degree of trauma helps people to build resiliency and grow from their misfortunes and better prepares them to face the future hardships of life. Our suffering doesn't only help to bolster a sense of resiliency in us.

The difficult times that we endure play a key role in helping us to lead more meaningful lives. As Jean-Paul Sartre put it, "Human life begins on the far side of despair." That is, many of the ways people feel their lives are meaningful are grounded in the sufferings they have experienced. One research project investigated the differences between people who found their lives to be happy and those who found them to be meaningful. While, on average, happy lives and meaningful lives overlap a great deal, the researchers focused on those aspects of a meaningful life that were distinct from happiness. And, remarkably, they found that people who had more meaningful lives reported that they had more experience suffering through past negative events. They also reported worrying more and enduring more things that caused them stress. On the other hand, these past experiences with suffering tended to reduce people's overall levels of happiness. Our sufferings, then, seem to help to provide people with the sense that their lives are more meaningful, even if these events are associated with lower feelings of happiness.

We can also see evidence of the relation between suffering and a meaningful life in another intriguing research finding. If you look around the world to identify where people are more likely to be leading meaningful lives, you don't tend to find many of them in places where people's basic needs are easily satisfied; rather, people who are leading meaningful lives are more common in places where life is harder. On average, the poorer a country is, the more likely its citizens will report that their lives are meaningful.

정답 및 해설

1) [정답] ④

[해설] ④ 문장의 주어는 these internal narratives 이므로, not only A but also B 구문에서 동사 shape와 병렬 구조를 이루어야 한다. 따라서 현재분사 형태인 becoming을 동사 원형인 become으로 고쳐야 한다.

2) [정답] ③

[해설] 인지적 요구가 낮은 단순 업무(shallow work)는 우리를 바쁘게 만들지만, 실제적인 가치를 창출하거나 역량을 향상시키는 데는 한계가 있으며 오히려 생산성에 해를 끼칠 수 있다는 내용의 글이다. 따라서 글의 요지로 가장 적절한 것은 ③이다.

3) [정답] ④

[해설] 지문에서 주관적 실재는 언어와 같은 합의된 상징을 통해 획득되고 공유된다고 언급되어 있으므로, 공유될 수 없다는 내용의 ④는 글의 내용과 일치하지 않는다.

4) [정답] ②

[해설] 우울증은 단일 질환이 아니라 다양한 원인과 기제에 의한 증상들의 집합체이며, 그로 인해 증상 조합과 치료법이 매우 다양하다는 것이 글의 핵심 내용이다. 우울증 증상의 조기 발견이 사회적 의료 비용을 줄인다는 내용의 ②는 글의 전체 흐름과 관계가 없다.

5) [정답] ③

[해설] 철학에서 유추는 단순히 설명을 돕는 예시(illustration)의 역할을 하기도 하지만, 신의 존재 증명과 같은 논증의 핵심적인 부분(integral part of an argument)으로 사용되기도 한다는 내용의 글이다. 따라서 글의 제목으로 가장 적절한 것은 ③ '단순한 예시를 넘어: 논증의 핵심 요소로서의 유추'이다. ① 단순한 예시: 플라톤에 나타난 유추의 유일한 역할 ② 철학자들이 과학적 유추의 사용을 피하는 이유 ④ William Paley의 '설계 논증'에 나타난 역사적 오류 ⑤ 신성한 창조주와 인간 장인 사이의 기능적 차이

6) [정답] ②

[해설] 회복은 생리적, 심리적 자원을 복구하는 과정이자 결과이며, 완전한 회복을 위해서는 두 측면이 모두 필요하다는 내용의 글이다. 고용주가 업무 시간 중 높은 정신적 에너지를 보이는 직원에게 금전적 보상을 제공해야 한다는 내용의 ②는 글의 전체 흐름과 관계가 없다.

7) [정답] ①

[해설] 과거의 부정적인 경험과 스트레스가 전반적인 행복 수준은 낮출 수 있지만, 회복력을 길러주고 삶에 대한 더 깊은 의미를 부여한다는 내용의 글이다. 따라서 요약문의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은 ① '줄이다 - 의미'이다. ② 향상시키다 - 정체성 ③ 줄이다 - 주관적 실재 ④ 보존하다 - 행복 ⑤ 향상시키다 - 의미

8) [정답] ①

[해설] 인간은 세상을 이해하기 위해 사건과 사실을 중심으로 이야기를 형성하며, 이러한 내면의 서사가 신념과 정체성을 형성한다는 내용의 글이다. 따라서 글의 주제로 가장 적절한 것은 ① '실재를 해석하기 위해 서사를 형성하는 인지 과정'이다. ② 지배적인 이야기에 도전하기 위해 통계를 사용하는 전략 ③ 정치적 이데올로기를 형성하는데 있어 객관적 사실의 필요성 ④ 교육적 배경이 개인의 스토리텔링 능력에 미치는 영향 ⑤ 편향을 피하기 위한 다양한 개인적 경험의 중요성

9) [정답] ⑤

[해설] 살로우 워크를 너무 많이 하면 바쁘고 스트레스를 받지만, 들인 노력만큼의 결과물(output)은 거의 보이지 않는다고 언급되었으므로 ⑤는 글의 내용과 일치하지 않는다.

10) [정답] ①

[해설] 주관적 실재는 사회적 상황에 대한 개인의 해석을 통해 형성되고 상징을 통해 전달되므로, 집단적 행동의 일관성을 위해서는 상징에 대한 의미 공유가 필수적이라는 내용의 글이다. 따라서 요약문의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은 ① '주관적 실재 - 공유'이다. ② 주관적 정체성 - 다양성 ③ 주관적 실재 - 배제 ④ 객관적 실재 - 습득 ⑤ 주관적 정체성 - 변화

11) [정답] ④

[해설] 우울증이 흔하지만 이해하기 어렵다는 주어진 글 다음에, 그 이유가 우울증이 증상의 집합체이기 때문이라고 설명하는 (C)가 온다. 이어서 원인이 한 가지가 아니라는 내용의 (A)가 연결되고, 마지막으로 증상 조합과 치료법 또한 다양하다는 내용의 (B)가 이어지는 것이 자연스럽다. 따라서 가장 적절한 순서는 ④이다.

12) [정답] ④

[해설] ④ 문맥상 유추가 '의도되지 않는다'는 수동의 의미가 되어야 하므로, be동사 is 뒤에 과거분사 형태인 meant가 와야 한다. 따라서 mean을 meant로 고쳐 써야 한다.

13) [정답] ①

[해설] 회복을 결과(outcome)와 과정(process)이라는

두 가지 관점에서 정의하고, 신체적·심리적 회복의 특성과 그들 사이의 선후 관계를 설명하는 글이므로 글의 목적으로 가장 적절한 것은 ①이다.

14) [정답] ④

[해설] 지문에 따르면 의미 있는 삶을 사는 사람들은 과거의 부정적인 사건을 통해 더 많은 고통을 경험했다고 보고했으므로, 경험이 적었다고 기술한 ④는 내용과 일치하지 않는다.

15) [정답] ④

[해설] 내면의 서사가 우리의 신념과 의견을 형성할 뿐만 아니라 정체성에 깊이 '뿌리 박히게' 된다는 문맥이 되어야 하므로 '고립된'이라는 의미의 isolated는 부적절하다. 이를 rooted나 embedded와 같은 단어로 고쳐야 한다.

16) [정답] ④

[해설] 딥 워크는 깊은 집중력을 필요로 하는 활동이므로, 이를 수행하기 위해 필요한 환경적 조건을 언급하는 것이 적절하다. 따라서 빈칸에 들어갈 말로 가장 적절한 것은 ④ '방해 요소가 없는 환경이 필요하다'이다. ① 우리가 주의가 산만한 동안 활동을 수행해야 한다 ② 살로우 워크에 모든 시간을 소비해야 한다 ③ 논리적 유형의 과업을 실행하는 데 집중해야 한다 ⑤ 다양한 일상적 유형의 과업을 요구한다

17) [정답] ②

[해설] 우리가 생각하는 '실재'가 타인에 의해 공유될 것이라는 가정이 틀렸다는 말은, 각자의 해석에 따른 주관적 실재가 서로 다를 수 있음을 의미한다. 따라서 밑줄 친 부분이 의미하는 바로 가장 적절한 것은 ② '한 개인이 인식하는 "실재"가 반드시 타인이 인식하는 것과 동일하지는 않다'이다. ① 개인의 관점은 주관적 정체성의 형성에 항상 부차적이다 ③ 언어와 같은 합의된 상징은 항상 완벽하게 공유된 객관적 실재를 보장한다 ④ 집단 내의 혼란은 사람들이 자신의 주관적 정체성을 무시할 때만 발생한다 ⑤ 주관적 실재는 외부 메시지의 해석에 의해 영향을 받을 수 없다

18) [정답] ②

[해설] 우울증의 다양한 증상들을 나열하고, 그것이 단일한 질병이라기보다 다양한 원인과 증상 조합을 가진 복합적인 상태임을 설명하는 글이다. 따라서 글의 목적으로 가장 적절한 것은 ②이다.

19) [정답] ①

[해설] 글의 전반부에서 유추가 단순한 예시 기능을 한다고 설명한 뒤, however를 통해 다른 경우를 소개하고 있다. 뒤이어 나오는 시계 유추 사례가 논증의 근거로 쓰였으므로 빈칸에는 ① '유추가 논증의 핵심적인 부분일 수 있다'가 적절하다. ②

논증을 단순화하기 위해 태양의 이미지가 사용된다 ③ 철학적 유추는 종종 사상가들에 의해 오해받는다 ④ 유추의 역할은 장식적인 기능에 국한된다 ⑤ 과학자들은 철학자들보다 유추에 더 많이 의존한다

20) [정답] ④

[해설] 지문에서 회복 과정이 회복 결과에 '앞서며(precede)', 그 결과 적절한 회복이 이루어졌는지를 결정한다고 설명하고 있다. 따라서 회복 과정이 결과를 '따른다'는 의미의 follow는 문맥상 적절하지 않으며, precede로 고쳐야 한다.

21) [정답] ②

[해설] 고통과 역경이 회복력을 길러주고 삶을 더 의미 있게 느끼게 해준다는 연구 결과를 소개하는 글이다. 따라서 글의 제목으로 가장 적절한 것은 ② '고통 속의 의미: 부정적인 사건들이 어떻게 의미 있는 삶을 형성하는가'이다. ① 행복 대 의미: 왜 인간의 삶에서 그것들은 절대 겹치지 않는가 ③ 스트레스의 함정: 왜 과거의 부정적인 사건들은 피해야 하는가 ④ 행복에 관한 연구: 더 많이 걱정할수록 더 행복해진다 ⑤ 절망에 관한 철학적 견해: 사르트르가 주관적 실재를 재정의한 이유
