1. 책장 배송에 관한 다음 글의 내용과 일치하는 것은?

To the Customer Service Team,

Approximately a month ago, my wife and I bought a set of bookshelves from your store. I was very excited to find furniture that flawlessly matched our new home. When we bought the bookshelves, the manager said it would take four weeks for delivery, which was last weekend. We had set our arrangements to guarantee someone would be available to receive the delivery; however, no one came with the bookshelves that day. This delay has caused us significant inconvenience. Therefore, please provide a definite and specific delivery date. We expect this issue to be addressed quickly, so that we can rearrange our schedule to receive the delivery without any confusion.

- ① The writer bought the bookshelves because they were inexpensive.
- ② The manager stated that the delivery time would be four weeks.
- ③ The delivery failed because the writer was not available last weekend.
- ④ The writer is demanding compensation for the significant inconvenience.
- ⑤ The writer wants a new date so he can cancel the order without confusion.

I was going in the direction of a forest path that I knew would lead me home. But nearly as if someone had turned off all the lights I was suddenly in a dark forest with no light of any kind. Feeling disoriented, I stumbled. I fell. I ripped my clothes and hurt myself falling down a hill. In despair I stopped and leaned against a tree. I have no idea where I am now. Will anyone even realize that I'm missing? It was then that a slight aroma floated through the dark: the smell of cooking. I stumbled towards it, and shortly, a slight, yellowish light shone through the trees. It was Uncle Karl's cottage and I could see him through the window! unspeakably grateful, I knew I could at last request help. My ordeal was over.

- ① 집으로 가는 길이라고 생각한 숲길을 걷고 있었다.
- ② 갑자기 어두워진 숲에서 언덕을 굴러떨어지며 다쳤다.
- ③ 나무에 기대는 채 자신이 실종된 것을 누군가 알지 걱정했다.
- ④ 어둠 속에서 요리 냄새와 함께 노란색 불빛을 발견했다.
- ⑤ 창문을 통해 Karl 아저씨가 자신에게 도움을 요청하는 것을 보았다.

When you are working in healthcare, it is important to develop a solid professional relationship with your patients. By establishing realistic self-boundaries, you can protect that relationship. It is important to keep the focus on the patient. When working with patients who are seen frequently, it is easy to start to think of them as friends. With a friend, you are likely to share personal information that is not appropriate with a patient. Patients may feel that they cannot share important health-related information because you are their friend, and it would be embarrassing to share that information. Self-boundaries can also be thought of as professional boundaries. You need to treat patients with respect and keep the relationship professional. Be friendly to patients and always keep the focus on the patient.

Cover a new, wet swab in salt, and softly touch different locations on your tongue, noting where your taste seems strongest. Next, gargle with water to completely clean your tongue, use a swab covered with sugar on the same locations, and note those results. Gargle again, and then swab with lemon juice. After a final gargle, try coffee. Check your responses with your friends'. Your taste pattern may show more than just taste preferences. Recent research suggests connections between taster status and behavioral problems. For example, "non-tasters" tend to have a higher rate of alcoholism, perhaps because liquor tastes less bitter to them. Conversely, "super-tasters" may stay away from healthy but slightly bitter foods such as broccoli, thus denying themselves a proper diet. So, although taste is not nearly as exciting as vision, hearing, or even touch, it is logical for you to focus more on it because chemistry, at least in your mouth, could be destiny.

* swab: 면봉

5. 다음 빈칸에 들어갈 말로 가장 적절한 것은?

How is an experiment made persuasive? Who are its target audiences? The rise of experimental science brought reliable knowledge verified by experience, but not without complications and caveats created by its social context. The history of science (experimental or not) is no paradigm of diversity, although historians today are rescuing contributions previously neglected, forgotten, or ignored. We can hope that the science of the future will do better, and will be the better for it.

Experiments testify to science's embrace of ignorance. Arguably the worst thing a scientist can do is to suppose they know what will happen in a given scenario without bothering to check. The rise of the experimental philosophy coincided with the liberation of curiosity as a valuable rather than a questionable attribute. For all that experimental science today is often assumed to be undergirded by a philosophical framework and an approved methodology ("state your hypothesis and then test it"), the fact is that, as philosopher of science Ian Hacking says, "One can conduct an experiment simply". Indeed, in the view of Charles Darwin's son, the astronomer George Darwin, once in a while one should do a completely crazy experiment, even if it is most likely to prove fruitless. You never know until you try.

- ① to confirm a previously stated hypothesis
- ② out of curiosity to see what will happen
- ③ according to an approved philosophical methodology
- ④ to prove that other scientists are ignorant
- ⑤ after checking all the possible scenarios

6. 다음 글의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

Despite its success in explaining observed phenomena, a scientific theory can never be proved true beyond all doubt, because future observations may disagree with its predictions. However, anything that qualifies as a scientific theory must be supported by a large, compelling body of evidence.

In this sense, a scientific theory is not at all like a hypothesis or any other type of guess. We are free to change a hypothesis at any time, because it has not yet been carefully tested. In contrast, we can discard or replace a scientific theory only if we have a better way of explaining the evidence that supports it. (A), the theories of Newton and Einstein offer great examples. A vast body of evidence supports Newton's theory of gravity, but by the late nineteenth century scientists had begun to discover cases where its predictions did not perfectly match observations. These discrepancies were explained only when Einstein developed his general theory of relativity, which was able to match the observations. (B), the many successes of Newton's theory could not be ignored, and Einstein's theory would not have gained acceptance if it had not been able to explain these successes equally well. It did, and that is why we now view Einstein's theory as a broader theory of gravity than Newton's theory. As we will discuss in the next section, some scientists today are seeking a theory of gravity that will go beyond Einstein's. If any new theory ever gains acceptance, it will have to match all the successes of Einstein's theory as well as work in new realms where Einstein's theory does not.

8. 다음 글을 읽고 답할 수 없는 질문은?

The chart above shows the proportion of 25- to 34-year-olds (young adults) who achieved either a bachelor's or a master's degree as their highest degree in five chosen OECD countries in 2022. The Republic of Korea had the largest proportion of young adults with a bachelor's as their highest degree, but the smallest proportion of those with a master's as their highest degree. New Zealand had the second-largest proportion of young adults with a bachelor's as their highest degree, followed by the United States. In Luxembourg and France, the proportion of young adults with a master's as their highest degree surpassed that of those with a bachelor's as their highest degree, different from the other three countries. In Luxembourg, the proportion of young adults with a master's as their highest degree was not quite double that of those with a bachelor's as their highest degree. France displayed the narrowest gap of 9 percentage points between the proportions of young adults with a bachelor's and a master's as their highest degree.

- ① Which country had the smallest percentage of young adults with a master's degree?
- ② In which countries was the rate of master's degree holders higher than that of bachelor's degree holders?
- ③ What was the exact gap in percentage points between the two degrees in France?
- ④ What was the specific proportion of young adults with a bachelor's degree in New Zealand?
- ⑤ Which country ranked third in the proportion of young adults with a bachelor's degree?

Eunice Kathleen Waymon was an American artist and civil rights campaigner. She showed musical ability from a young age. At 12, during her first classical performance, her parents' chairs, initially near the front, were relocated to the back against their wishes to make room for white people. After finishing high school, she prepared for an audition at the Curtis Institute of Music, but her application was denied, which she accredited to racial discrimination. To pay for her private studies, she began performing in Atlantic City, taking the stage name "Nina Simone." In the 1960s, she became a proponent of the Civil Rights Movement and created and performed songs as a reaction to racism and violence in the Southern United States. Angered by the racism in the United States, she departed the country in 1970, living in different locations before moving to France. She died in 2003 but her reputation continues through her strong music.

Nina Simone, who experienced racial (A)_____ early in her life, became an influential artist and civil rights campaigner, using her music to (B)_____ injustice.

At a molecular level, archaea seem to resemble eukaryotes more closely in their machinery for handling genetic information (replication, transcription, and translation), but bacteria more closely in their apparatus for metabolism and energy conversion. We discuss below how this might be explained.

Both in the storage and in the copying of genetic information, random accidents and errors occur, altering the nucleotide sequence—that is, creating mutations. Therefore, when a cell divides, its two daughters are often not quite identical to one another or to their parent. On rare occasions, the error may represent a change for the better; more probably, it will cause no ①significant difference in the cell's prospects. But in many cases, the error will cause serious damage—for example, by ②disrupting the coding sequence for a key protein. Changes due to mistakes of the first type will tend to be ③perpetuated, because the altered cell has an increased likelihood of reproducing itself. Changes due to mistakes of the second type – selectively ④neutral changes – may be perpetuated or not: in the competition for limited resources, it is a matter of chance whether the altered cell or its cousins will succeed. But changes that cause serious damage lead nowhere: the cell that suffers them dies, leaving no ⑤progeny. Through endless repetition of this cycle of error and trial-of mutation and natural selection organisms evolve: their genetic specifications change, giving them new ways to exploit the environment more effectively, to survive in competition with others, and to reproduce successfully.

Some parts of the genome will change more easily than others in the course of evolution. A segment of DNA that does not code for protein and has no significant regulatory role is free to change at a rate limited only by the frequency of random errors. In contrast, a gene that codes for a highly optimized essential protein or RNA molecule cannot alter so easily: when mistakes occur, the faulty cells are almost always eliminated. Genes of this latter sort are therefore highly conserved.

* perpetuate: 영속시키다 ** progeny: 자손

Within liberal culture, the value of fair equality of opportunity for individuals (A) [outweighs / outweighing] the preservation of the family's integrity. In contrast, for Confucian culture, while seeking fair equality of opportunity for individuals is important, the family assumes a fundamental role in human flourishing, and living within a family institution is considered the essential way of life. Individuals are primarily understood as family members before they are (B) [regarded / regarding] as state citizens. Therefore, for Confucians, the family possesses inherent value that should never be abolished, even if it results in certain societal inequalities. Consequently, I believe a suitable universal or global ethics for governance should establish only a minimal framework, (C) [allowing / allowed] individual cultures the freedom to determine how they wish to balance the values of fair equality of opportunity and the prosperity of the family. Some cultures, like the liberal one, may choose to impose increasing restrictions on the role of families and implement more egalitarian government programs for education, healthcare, and other positive rights in society in the pursuit of fair equality of opportunity. On the other hand, other cultures, like the Confucian, may prefer to primarily assign welfare responsibilities to the family, tolerating inequalities stemming from the existence of the family as long as everyone's basic freedoms and rights are safeguarded in the state.

* Confucian: 유교의 ** egalitarian: 인류 평등주의의

12. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은?

Yet this is the case.

Why does this matter? This potted history of national income accounting emphasises that there is no single, natural way to classify and measure economic phenomena or the prevailing definition of the economy. The framework used meets the needs of its time, within the mental constructs of its time. The very idea of the economy as a distinct domain of national life dates from a specific period and instantiates a particular "well-defined conceptual and theoretical understanding of macroeconomic behaviour".

Statistics in the twentieth century became the systematic collection of quantitative information needed by the state. (①) This process occurred in all the industrialised countries as a key part of their becoming modern states. (②) Desrosières writes: "It is difficult to think simultaneously that the objects being measured really do exist and that this is only a convention". (③) Phenomena such as prices being charged and products being sold exist, but the categories and classification frameworks underpinning the collection, aggregation, and organisation of official statistics are devised to serve the purposes of the state, for macroeconomic or for social policies. (④) Theodore Porter described the use of statistics to create state authority: "Quantification is a way of making decisions without seeming to decide", characterising it as a "social technology" intended to build trust in authority. (⑤)

Similarly, in his classic book Seeing Like a State, James Scott argues that the measurements created for the purposes of government to give order to messy reality affect decisions and consequently influence that reality—generally for the worse, by ignoring important differences. In any case the invented classifications become "real." GDP and other economic statistics are entities "that hover between the realms of the invented and the discovered". "Official" statistics come to define the public sphere that structures political debate.

13. 다음 글의 주제로 가장 적절한 것은

Wondrous as that is, it is not the whole Mona Lisa. Even the whole Mona Lisa is not the whole Mona Lisa: the painting's meaning shifts when you learn its monetary value, or about the life of Leonardo da Vinci, or how the painting deviates from other portraits from the sixteenth century. There are countless ways to understand the Mona Lisa, and there are countless ways to understand ourselves.

The complexity of the human body means it can only be revealed part by part, tool by tool. Just as an expert in the taste and colour of wine will gain much by being aware of the chemistry that underlies those qualities, so each perspective on the body can potentially enhance the others. And yet every scientific tool, from microscopes to mathematics, and every aspect of the body, from the brain to the microbiome, requires such depth of expertise that this tends not to happen: we tend to study the human body in silos, each community insulated from the others by its own specialised vocabulary of symbols and acronyms necessary to communicate nuances. Research communities may be dedicated to one type of scientific tool or a specific component of the body, such as one type of cell. How different types of cell communicate with one another becomes its own specialist topic. Even simple forms of life on Earth such as an individual bacterium are now rarely studied as a whole, and the human body is manifestly much more complex. As long ago as 1890, The Times newspaper commented that knowledge 'had already become too vast to be manageable'. Today, nobody is an expert in the whole of anything.

Many books have examined one or other specialist topic about the human body. My hope for this book is that by bringing together six key areas of contemporary biological investigation that are normally dealt with separately, we might regain a sense of the whole body and begin to see not just what the new science shows, but what it all means.

* in silos: 개별적으로 분리해서

[지문출처: *The Secret Body - How the New Science of the Human Body Is Changing the Way We Live* (Daniel M. Davis)]

- ① benefits of integrating diverse perspectives in medical research
- ② necessity of specialized vocabulary for efficient scientific communication
- ③ limitations of modern science in studying microscopic organisms
- ④ tendency toward fragmented study due to increasing scientific specialization
- ⑤ historical overview of how expertise in the human body has evolved

14. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

From the opulent palaces of bygone eras to the sleek corporate headquarters of today, the strategic use of glass reveals a fascinating story about who holds the reins of control and how they choose to display it.

Did You Know? The Romans were among the first to widely use glass in architecture, though their techniques were limited. Clear, large panes of glass were extremely rare and a sign of immense wealth and power.

Historically, palaces weren't just homes: they were carefully constructed stages ① designed to impress and intimidate. While stone symbolized permanence and strength, glass offered something equally potent: visibility. The introduction of large windows in palaces allowed rulers to literally look down upon their subjects, ② emphasizing their elevated position. Conversely, it also allowed subjects to gaze up at their leaders, creating a sense of awe and distance. Consider the Palace of Versailles: its Hall of Mirrors, lined with reflective surfaces, not only amplified the grandeur of the space but also placed the king at the center of a dazzling display, ③ reinforcing his absolute authority. The use of glass in palaces wasn't merely aesthetic: it was strategic. Open sightlines allowed for better surveillance and control, ④ which ensuring the safety and security of the ruling family. Courtiers and visitors were constantly aware of being observed, ⑤ contributing to an atmosphere of careful obedience and respect. The very architecture dictated social behavior, with glass acting as a silent enforcer of the power dynamic.

Did You Know? Early window glass was often imperfect, containing bubbles and distortions. These flaws, ironically, could enhance the sense of exclusivity, highlighting the handcrafted nature of the material and its inaccessibility to the common person.

In modern democracies, government buildings often strive to project an image of transparency and accessibility. The use of large glass facades is intended to symbolize openness and accountability.

* surveillance: 감시 ** courtier: 신하

15. 다음 빈칸에 들어갈 말로 가장 적절한 것을 고르시오.

The topic of public opinion has been of great concern in political science. It is defined as opinions regarding public affairs that are expressed in public settings. Elisabeth Noelle-Neumann's spiral of silence theory demonstrates how interpersonal communication and media operate together in the development of public opinion. As a political researcher in Germany, Noelle-Neumann observed that during election campaigns, certain views seemed to get more play than others, and sometimes people muted their opinions rather than talking about them, especially if those opinions were perceived to be unpopular.

(A) This process occurs in a spiral, so that one side of an issue ends up with considerable publicity and the other side with very little.

(B) Noelle-Neumann calls this the spiral of silence. The spiral of silence occurs when individuals who perceive that their opinions are popular express them, whereas those who do not think their opinions are popular remain quiet.

(C) In everyday life, people express their opinions in a variety of ways: they talk about them, they wear buttons, they put bumper stickers on their cars, and they post their views on Instagram and X. According to Noelle-Neumann's theory, people are more apt to do these kinds of things when they perceive that others share their opinions.

The 2016 US presidential election, in which polls suggested that Hillary Clinton would win, provides an example of the spiral of silence. Some voters who supported Donald Trump were reluctant to voice their support for him because they perceived others did not share their opinions: as a result, there was reduced media coverage of pro-Trump voters. The spiral of silence, then, seems to have been a contributing factor in why the polls were mistaken about who would win the election.³⁴ A similar effect may have happened in the 2024 US presidential election.

16. 다음 글의 밑줄 친 우리말을 <조건>에 맞게 영작하십시오.

A similar notion of structure is at work in physics. The examples in this section reveal that the same basic idea, along with various details surrounding it, apply just as much in physics. In particular: just as the different coordinate systems we can use for the Euclidean plane tell us about the plane's structure, so too in physics the different coordinate systems, reference frames, or other descriptive devices we use can tell us about underlying structure, in this case the structure of the physical world.

Consider units of measure, one kind of descriptive device we are familiar with using in physics. Spatial distances can be given in terms of feet or meters or some other unit, and the physics will be the same regardless. We conclude from this that physics does not prefer one unit of length over any other, and we may choose any one we like for reasons of convenience. We further conclude that any feature depending on that choice, such as the particular numerical value assigned to the spatial separation between two locations, is not out there in the world apart from a choice of unit. Temperatures can likewise be given in terms of the Fahrenheit or Celsius or Kelvin scale. Nothing in the physics changes when we switch from one scale to another: any of these describe the temperature facts equally well. We conclude that the choice of scale is an arbitrary choice in description, and that any feature that depends on that choice, 한 물체가 다른 물체보다 두 배 더 뜨거운지 여부와 같은, is scale-dependent, not out there in the world apart from a choice of scale.

Since physics does not recognize or pay attention to differences in scale or unit of measure, since the physics is the same regardless, we infer that the choice of unit or scale is merely an arbitrary or conventional choice in description. There is no "unit of measure structure" in the world. Different units or scales simply provide different, equally legitimate ways of describing the world.

* arbitrary: 임의적인

17. 다음 글을 읽고 아래 질문에 대한 답으로 알맞은 것을 고르면?

Even though sea animals live in it, they still need to take in water for their bodies to work properly. They just need to remove any excess salt it might bring with it. Salt soaks up water like a sponge. If you put a small pile of salt on a small plate, then add enough water to the side, ensuring an edge touches the salt, the salt will soak up the water. Now you have a mound of damp salt. Observe that it has grown in size. The same rule applies to sea animals. If the body fluids in a sea animal are saltier than the seawater it lives in, then the excess salt in the animal's body will soak up seawater. This can cause them to swell up. On the other hand, if the quantity of salt in the seawater is greater than the quantity of salt in the body fluids of a sea animal, the excess salt in the water will pull fluids out of the animal's body, causing it to dehydrate and shrivel.

* swell: 부풀다 ** dehydrate: 수분이 빠지다

Question: According to the passage, under what condition does a sea animal "dehydrate and shrivel"?

- ① When the animal's body contains too much excess water.
- ② When the animal's body fluids are saltier than the seawater.
- ③ When the salt in the seawater pulls fluids out of the animal.
- ④ When the animal soaks up water from the seawater like a sponge.
- ⑤ When the animal's body fails to take in enough salt.

18. 밑줄 친 (A)~(E) 중 어법상 틀린 것의 개수는?

Insects like this have been around for a long time. Recently, tiny fossils of ancient wing scales, serendipitously found by researchers looking for pollen grains in sedimentary rocks, revealed that insects recognisable as moths were flying around well over 200 million years ago, before the earliest dinosaurs and before flowering plants. These first moths were tiny, perhaps feasting on spores and pollen of prehistoric plants. Since then, natural selection has been at work, shaping their adaptations to different habitats and lifestyles as new opportunities arose. Lepidoptera are now one of the most diverse animal groups on our planet.

Distinguishing moths from butterflies on outward appearance (A)are not always easy, but there are a few rules of thumb that can help. In most butterflies the antennae end with a small club-shaped swelling, whereas in moths they are usually feathery or taper to a fine tip. Butterflies tend to rest with their wings (B)holding shut above their body, whereas moths more usually rest with the upper sides of the wings on full view. Further distinctions can be made by looking for a tiny hook that joins fore- and hindwings, a feature only (C)present in moths. The stereotypical differences, with moths cast as the drab, nocturnal cousins of colourful sun-loving butterflies (D)are simply wrong. There are many brightly coloured moths and many which are active throughout the day. Equally, there are a few nocturnal butterflies and plenty that come (E)clothing in shades of brown and grey. It's more sensible to think of them together; both butterflies and moths are beautiful and fascinating insects.

Taxonomically, the butterflies are in fact just one of many Lepidopteran 'clans'. For convenience, a bit like a family tree, Lepidoptera are divided up into forty-two groups called superfamilies, based on similarities in their genetics. Butterflies form just one of these groups, the Papilionoidea. All the others, making up more than 90 per cent of the known species of Lepidoptera, contain the insects we refer to as moths. My friend who specialises in flies suggests butterflies would be better renamed 'butter-moths'. 'Too many things are called flies,' he grumbles.

* nocturnal: 야행성의 ** club-shaped: 곤봉 모양의

The stakeholder model of wildlife management involved hunters and anglers but also included anyone who had a vested interest in a wildlife issue, program, action, or decision leading to an action. As the wildlife profession discusses the North American Model of Wildlife Conservation, more of the public will need to be included in management of our natural resources, and the stakeholder model goes a long way toward that goal.

There are numerous ways wildlife is managed, but they all imply stewardship and can be classified into two broad categories: active management and inactive management. Active management does something to the population - such as increasing or decreasing its size - in a direct manner through strategies like translocations or hunting, respectively. Populations can also be actively managed by altering the habitat to the benefit or detriment of a population. If population numbers are too low for the goal of management agencies, other active management can be incorporated, such as predator control to minimize neonatal mortality or habitat improvement to provide required cover for neonates from predators. These efforts represent active approaches to management. Other populations may not be actively managed, like those in national parks. In such situations, management activities minimize external influences on populations and habitat, which often involves management of humans and not animals.

Still, other populations may be so poorly understood that no action is taken because managers do not have enough information to make management decisions. Thus the management is inactive. It is important to understand that all populations are managed either actively or inactive. For some populations, no active management occurs, but they are still managed because the decision to do nothing is a management decision; in these cases, management is often referred to as passive management or nonmanagement.

* stewardship: (재산·조직체 등의) 관리 책임

** neonatal: 갓 태어난

[지문출처: *Wildlife Management and Conservation - Contemporary Principles and Practices* (Johns Hopkins University Press 출판사)]

<Summary> Wildlife management approaches are categorized by their level of intervention: (A)_____ management involves direct actions like hunting or habitat modification, while (B)_____ management focuses on limiting human influences, as seen in national parks.

20. 다음 글에서 전체 흐름과 관계 없는 문장은?

Extracting raw materials from the earth and then shipping them around the world to be processed and manufactured into products that require further shipment before ultimately being used is an extremely wasteful process. The waste associated with the linear economy can be greatly reduced by rethinking waste altogether. Waste isn't necessary and is instead a resource that has not reached the next step in its lifecycle.

Waste has historically been seen as a necessary driver of the economy. Sales are tied to the amount of a product supplied, which is directly dependent on the demand for that product. ① Therefore, if you design the product to eventually be wasted, you can ensure that the demand for more products will be sustained. ② Many strategies have been incorporated into product design and use to ensure that waste is inevitable, such as planned obsolescence, limited access to tools for repairs, and use of cheap materials. ③ All these strategies ensure that the consumer will have limited access to the product in use and will eventually require a replacement. ④

Manufacturing companies often outsource their production to other countries to reduce labor costs. ⑤ Those who supported the idea that waste is necessary to drive demand failed to realize that prioritizing the elimination of waste via repair and remanufacturing creates a different kind of demand: products as a service. Through this setup, companies simply lease out products that were once sold directly to the customer. By way of this transition of ownership, companies maintain revenue by offering maintenance and repair services and are encouraged to develop resilient products rather than cheap, single-use products. The customers, then, receive access to products at a fraction of the cost and don't need to worry about the time and expense associated with maintaining, insuring, and replacing the product.

Waste is a human concept; it cannot be found in nature. Only when waste is rejected as a concept will the true value of materials be fully understood.

* planned obsolescence: 계획적 노후화

21. 밑줄 친 in the false hope that it will yield가 다음 글에서 의미하는 바로 가장 적절한 것은?

The Greenwich Observatory knew that they held precious information, and would charge a fee for clients to receive the precise time via telegraph lines. Time became a commodity. Viewing something so fundamental to our existence in this way leads to damaging individual and societal consequences. Just look at what is unfolding around the world thanks to our similar attempts to treat natural resources as a commodity.

Viewing time as a purchasable and consistent product cemented artificial views on time into our psyche, but every now and again we are forced to acknowledge this mistake. On twenty-six occasions in the last fifty years, a second has been added to everyone's day to adjust for the Earth wobbling and the rate of its spin changing. For instance, when El Niño, a climatic system in the Pacific, causes wind speed to change dramatically, it can slow the rotation of the Earth slightly. Indeed, the Earth's spin is generally slowing because the moon's gravity is acting as a drag, so days are getting longer by about 1.7 milliseconds per century (although oddly, the Earth has recently started to spin faster again). Events such as El Niño and the moon's gravitational pull disturb the similarity between man-made time and more flexible time based on the Earth's naturally occurring rotation. When events like this happen, a bunch of humans you probably have never heard of (the International Earth Rotation and Reference Systems Service, should you wish to thank them) make the decision to add a small slice of time to your day, without your knowledge. We try to force our fixed, man-made view of time on to nature in the false hope that it will yield. It doesn't.

Nonetheless, we continue to hold our totally artificial view of time, and many aspects of daily life are now shaped by it. Companies pay their employees what they think their time is worth. Interest charges on loans and credit cards are nothing more than a fee for the length of time for which the money is borrowed. Prior to this twisted conception of time, early Christians banned usury, or charging interest on a loan, because time belonged to God and could not be bought or sold.

* wobble: 흔들리다

[지문출처: Time Hacks - The Psychology of Time and how to Spend it (Ian Taylor)]

- ① believing that nature will eventually conform to our rigid, man-made time system
- ② planning to add leap seconds to make our man-made time more consistent
- ③ recognizing that our artificial view of time is a mistake that must be corrected
- ④ hoping that we can stop natural events like El Niño from disturbing the Earth's spin
- ⑤ attempting to create a new time system based on the moon's gravitational pull

[연계문항 2025년 10월 교육청(고2) 41~42번]

22. 다음 글을 읽고, [조건]에 맞게 빈칸에 들어갈 알맞은 말을 쓰시오.

The mind-body problem is no problem for muscle—it is nonsense—because muscle stops working and fades out of existence without constant interaction with the neurological system. Mind and muscle are not enemies. They're the best of friends.

A clearer view of muscle starts with considering some facts about how muscle works. When your hand is hanging at your side and then you lift it, opposing muscles on your upper arm shorten and lengthen—contract and relax—to bend the elbow. Biceps contract, and triceps relax. Reversing the motion, when you drop your hand back down, muscles reverse roles. Triceps contract, and biceps relax. Lift your hand or drop it, and muscle shows what it is: a system of symmetries, managed by orchestrated tension. As limbs rotate around joints, muscles activate and deactivate, contract and relax. All physical activity is paradoxical, in this sense: Movement depends on (-----), as much as it depends on what they do. Both are necessary, each in its time—and the same is true of each side of the pairs of concepts shaping how we talk of muscles.

Start with nature versus nurture: Some people are stronger or more muscular than others: is the difference inborn, or does it depend on what people do? To the latter question: What do you do? Do you have to lift weights, or is walking enough exercise? Whatever kind of exercise you do, how should you do it? Should you move fast or slowly? Lift heavy weights or lighter ones? How much does the size of muscles matter? Is big always stronger than small? Put like that, basic questions about muscle may sound like they have one right answer. Oppositions can polarize. But where muscle is concerned, few oppositions are true polarities. Look closely, and most prove to be paradoxes. Born and made, heavy and light, fast and slow, big and small: Those antagonists actually need each other.

This book, structured by such paradoxes, shows people navigating tensions and finding answers to vital questions about muscle, answers grounded in the central fact of muscle's critical, universal importance to life, for individuals and societies.

Cultivating that kind of awareness of muscle can be a constant struggle for the cultural reasons already mentioned, and for a material reason, too: Modern life is designed to marginalize muscles.

* biceps: 이두근 ** triceps: 삼두근

-지문에 있는 단어만을 활용할 것.

[연계문항 2025년 10월 교육청(고2) 43~45번]

23. 다음 글에 드러난 Mason의 심경 변화로 가장 적절한 것은?

Mason stared at the sign across the high school gym wall: "Annual Charity Marathon - Run for Sam." The motto stirred something in him. Sam, a bright seven-year-old who loved to draw and wished to be an artist, had a rare heart illness. Sam wasn't just anybody - he was the little boy living next door that Mason had taken care of every summer break. He had played in the park and spent summer afternoons following ice cream trucks with Sam. Seeing Sam's name on the sign made everything feel personal. Mason had always been the quickest runner in school, known among his peers as "The Speedster." But since his knee injury, he hadn't been able to run for a lengthy time. Still, when Mason thought about Sam and the hope this marathon symbolized, he knew he had to try. Mason did all he could to recover, following his doctor's guidance. A day before the registration cutoff, his doctor said a 3-mile run would be okay. Mason signed up for the 3-mile novice route, hoping to run for Sam. On marathon morning, Mason stood among the runners, heart beating. In the group, Sam was holding a sign: "Thank you, Runners!" Mason smiled. That was all the motivation needed. When the whistle sounded, Mason started strong, but since he hadn't run for so long, his energy diminished quickly. Every step was a challenge, but he pushed forward, inspired by the thought of how happy Sam would be. At last, he reached the finish line. As he was sitting to regain his breath, Sam came over and gave him bottled water. He felt pride, comfort, and thankfulness. He finally completed it - for Sam.

- ① indifferent → worried
- ② determined → proud and thankful
- ③ confident → disappointed
- ④ hopeful → regretful
- ⑤ nervous → calm

정답 및 해설

1	②	2	⑤	3	①	4	②	5	②

11	①	12	③	13	④	14	④	15	②
16	서술형	17	③	18	③	19	서술형	20	④
21	①	22	서술형	23	②				

1) [정답] ②

[해설] 관리자가 배송에 4주가 걸릴 것이라고 말했다(the manager said it would take four weeks for delivery)고 했으므로, 글의 내용과 일치하는 것은 ②이다. ① 글쓴이는 책장이 저렴해서 구매했다. ③ 지난 주말에 글쓴이가 없어서 배송이 실패했다. ④ 글쓴이는 상당한 불편함에 대한 보상을 요구하고 있다. ⑤ 글쓴이는 혼선 없이 주문을 취소하기 위해 새 날짜를 원한다.

[출제의도] 글의 세부 내용 파악하기

2) [정답] ⑤

[해설] 글쓴이가 창문을 통해 Karl 삼촌을 보았고, 마침내 '자신이(글쓴이)' 도움을 요청할 수 있다는 것을 알게 되었다고(I knew I could at last request help) 했으므로, Karl 아저씨가 글쓴이에게 도움을 요청하는 것을 보았다는 ⑤는 글의 내용과 일치하지 않는다.

[출제의도] 글의 세부 내용 파악하기

3) [정답] ①

[해설] 의료 분야에서 일할 때 환자와의 견고한 직업적 관계가 중요하며, 이를 위해 현실적인 자기 경계(직업적 경계)를 설정하여 환자에게 초점을 맞추어야 한다는 내용의 글이다. 따라서 글의 요지로 가장 적절한 것은 ①이다.

[출제의도] 글의 핵심 파악하기

4) [정답] ②

[해설] 미각 실험을 통해 미각 패턴이 단순한 맛 선호도 이상의 것을 보여주며, '미각 둔감자'나 '초미각자'와 같은 미각 상태가 알코올 중독이나 식습관 같은 행동 문제와 연관될 수 있다는 내용의 글이다. 따라서 글의 제목으로 가장 적절한 것은 ② '미각: 맛 그 이상, 당신의 행동에 대한 단서'이다. ① 집에서 간단한 미각 실험을 수행하는 방법 ③ 브로콜리와 같은 쓴 음식의 부정적인 건강 영향 ④ 미각 둔감자 대 초미각자: 유전적 경쟁 ⑤ 왜 미각이 우리가 가진 가장 흥미로운 감각인가

[출제의도] 글의 제목 추론하기

5) [정답] ②

[해설] 오늘날의 실험 과학이 '가설을 세우고 나서 그것을 검증하라'는 승인된 방법론에 의해 뒷받침된다고 종종 여겨지지만, 빈칸 앞의 '사실은(the fact is that)'과 Ian Hacking의 말을 인용하는 부분을 통해, 이와 대조되는 내용, 즉 가설 검증이 아닌 다른 동기로도 실험이 수행될 수 있음을 알 수 있다. 글 전체에서 '무지(ignorance)', '호기심(curiosity)', '무슨 일이 일어날지 알아보기 위해(to see what will happen)', '시도하기 전까지는 절대 알 수 없다(You never know until you try)' 등의 표현이 강조되므로, 빈칸에 들어갈 말로 가장 적절한 것은 ② '무슨 일이 일어날 것인지를 알아보기 위해 그저 호기심에서'이다. ① 이전에 진술된 가설을 확인하기 위해 ③ 승인된 철학적 방법론에 따라 ④ 다른 과학자들이 무지하다는 것을 증명하기 위해 ⑤ 모든 가능한 시나리오를 확인한 후에

[출제의도] 빈칸 내용 추론하기

6) [정답] ①

[해설] (A)에는 과학 이론을 버리거나 대체하는 것에 대한 앞 문장의 진술에 대한 구체적인 예시로 뉴턴과 아인슈타인의 이론을 들고 있으므로 '예를 들어'라는 의미의 For instance가 적절하다. (B)에는 아인슈타인의 이론이 관찰 결과와 일치했다는 내용 뒤에, 그럼에도 불구하고 뉴턴의 이론이 이론 많은 성과 또한 무시될 수 없었다는 역접의 내용이 이어지므로 '그럼에도 불구하고'라는 의미의 Still이 적절하다. 따라서 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은 ①이다.

[출제의도] 연결사 추론하기

7) [정답] ⑤

[해설] 한낮의 휴식 시간에 두뇌를 자극하는 뉴로빅 운동을 하면 인지적 피로를 예방하고 생산성을 높이는 등 인지 능력에 긍정적인 영향을 준다는 내용의 글이다. 주되지 않은 손을 사용하는 것은 뇌를 자극하여 사고의 유연성(flexibility)을 촉진해야 하므로, '저항'을 의미하는 ⑤ resistance는 문맥상 낱말의 쓰임이 적절하지 않다.

[출제의도] 문맥상 적절하지 않은 어휘 고르기

8) [정답] ④

[해설] 뉴질랜드가 학사 학위를 가진 젊은 성인들의 비율이 두 번째로 높았다고 언급되었지만, 그 구체적인 비율이 얼마인지는 본문에 나와 있지 않으므로, 답할 수 없는 질문은 ④ '뉴질랜드에서 학사 학위를 가진 젊은 성인들의 구체적인 비율은 얼마였는가?'이다. ① '어느 나라가 석사 학위를 가진 젊은 성인들의 비율이 가장 낮았는가?' → 한국은 석사 학위를 가진 젊은 성인들의 비율이 가장 낮았다. ② '어느 나라에서 석사 학위 소지자 비율이 학사 학위 소지자 비율보다 높았는가?' → 룩셈부르크와 프랑스였다. ③ '프랑스에서 두 학위 간의 정확한 퍼센트 포인트 차이는 얼마였는가?' → 9퍼센트포인트였다. ⑤ '어느 나라가 학사 학위를 가진 젊은 성인들의 비율에서 3위를 차지했는가?' → 미국이었다.

[출제의도] 답할 수 없는 질문 고르기

9) [정답] ②

[해설] 니나 시몬은 12살 때 부모님이 인종 때문에 뒷자리로 밀려나고 음악 학교 입학이 거부당하는 등 삶의 초기에 인종 (A)차별을 경험했고, 이후 민권 운동의 지지자가 되어 인종 차별과 폭력에 대응하는 노래를 만들며 불의에 (B)맞섰다는 내용의 글이다. 따라서 요약문의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은 ② '차별 - 맞서다'이다. ① 지지 - 받아들이다 ③ 교육 - 간과하다 ④ 차별 - 무시하다 ⑤ 지지 - 홍보하다

[출제의도] 글의 내용 요약하기

10) [정답] ⑤

[해설] ⑤ progeny는 '자손, 후손'을 의미하지만, 보기에 제시된 '세포나 유기체가 유래된 부모 또는 조상'은 'ancestor(조상)' 또는 'parent(부모)'에 대한 설명이므로 낱말의 영영풀이로 적절하지 않다. ① 주목할 가치가 있을 만큼 충분히 크거나 중요한 ② 어떤 것의 정상적인 작동이나 진행을 방해하는 ③ 어떤 것이 무기한 계속되도록 야기된 ④ 거의 또는 전혀 영향이 없는

[출제의도] 적절하지 않은 영영풀이 고르기

11) [정답] ①

[해설] (A) 문장의 주어는 단수 명사구인 The value of fair equality of opportunity for individuals이므로 단수 동사 outweighs가 어법상 적절하다. (B) they(Individuals)가 주제에 의해 여겨지는 대상이므로 수동태(are regarded)가 되어야 어법상 적절하다. (C) a minimal framework가 개별 문화에 자유를 '허용하는' 능동의 주체이므로 현재분사 allowing이 어법상 적절하다.

[출제의도] 적절한 어법 고르기

12) [정답] ③

[해설] 주어진 문장은 '그러나 이는 사실이다(Yet this is the case)'라는 의미이다. 앞선 ②번 문장에서 '측정되는 대상이 실재한다는 것과 그것이 단지 관행이라는 것을 동시에 생각하기는 어렵다'고 했으나, 주어진 문장은 '그럼에도 그것이 사실'이라고 이 내용을 받는다. 그리고 ③번 다음 문장에서 '현상(가격, 제품)은 존재하지만(exist), 그것을 분류하는 체계(categories, frameworks)는 국가의 목적에 맞게 고안된다(are devised)'라며 그것이 사실인 이유를 구체적으로 설명하고 있다. 따라서 주어진 문장이 들어가기에 가장 적절한 곳은 ③이다.

[출제의도] 주어진 문장 삽입하기

13) [정답] ④

[해설] 인간의 신체는 매우 복잡해서 깊은 전문 지식을 필요로 하며, 이로 인해 과학계가 '사일로(silos)'처럼 개별적으로 분리되어 신체를 단편적으로 연구하는 경향이 있다는 내용의 글이다. 지식의 방대함으로 인해 오늘날 누구도 전체의 전문가가 될 수 없다

고 언급한다. 따라서 글의 주제로 가장 적절한 것은 ④ '증가하는 과학적 전문화로 인한 단편화된 연구 경향'이다. ① 의학 연구에서 다양한 관점을 통합하는 것의 이점 ② 효율적인 과학적 의사소통을 위한 전문 어휘의 필요성 ③ 미생물 연구에 있어 현대 과학의 한계 ⑤ 인체에 대한 전문 지식이 어떻게 진화해 왔는지에 대한 역사적 개요

[출제의도] 글의 주제 추론하기

14) [정답] ④

[해설] ④ which는 주격 관계대명사로, 앞 문장의 내용 (Open sightlines allowed for better surveillance and control)을 선행사로 받으므로 뒤에는 절의 술어 동사가 와야 한다. 따라서 ensuring을 ensured로 고쳐 써야 한다.

[출제의도] 틀린 어법 고르기

15) [정답] ②

[해설] 주어진 글은 Noelle-Neumann이 선거 운동 중 사람들이 특정 견해(특히 인기 없는 견해)를 표현하기보다 침묵하는 현상을 관찰했다는 내용이다. (B)는 '이것을(this)' '침묵의 나선'이라고 부른다고 하여 주어진 글에서 언급된 현상을 명명하고, 그 개념(인기 있는 의견은 표현하고 인기 없는 의견은 침묵하는 것)을 정의한다. (A)는 '이 과정(This process)'이 나선형으로 일어나 한쪽 입장은 많은 주목을 받고 다른 쪽은 거의 받지 못하게 되는 결과를 설명하며 (B)의 내용을 이어서 설명한다. (C)는 일상생활에서 사람들이 의견을 표현하는 다양한 방식(대화, 배지, 범퍼 스티커, 소셜 미디어 게시물)을 예로 들고, 사람들이 타인이 자신의 의견을 공유한다고 인식할 때 이러한 행동을 더 많이 한다는 이론을 덧붙여 (B)와 (A)에서 설명한 이론을 구체화한다. 따라서 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은 ② (B) - (A) - (C)이다.

[출제의도] 빈칸 내용 추론하기

16) [정답] such as whether one object is twice as hot as another

[해설] <조건>에 맞게 <보기>의 단어들을 배열하여 문장을 완성한다. '~와 같은'이라는 의미를 나타내기 위해 such as를 사용하고, '인지 여부'라는 의미를 나타내기 위해 접속사 whether를 사용한다. '한 물체가 다른 물체보다 두 배 더 뜨거운지'라는 의미는 <조건>의 '배수사 비교 구문(as... as)'을 활용하여 whether one object is twice as hot as another로 표현할 수 있다.

[출제의도] 밑줄 친 문장 조건에 맞게 영작하기

17) [정답] ③

[해설] 바닷물 속 소금의 양이 해양 동물의 체액 속 소금의 양보다 많으면, 바닷물 속의 여분의 소금이 동물의 몸에서 체액을 끌어내어 수분이 빠지고 쪼그라들게(dehydrate and shrivel) 만든다고 언급했다. 따라서 질문에 대한 답으로 가장 적절한 것은 ③ '바닷물 속의 소금이 동물로부터 체액을 끌어낼 때'이

다. ① 동물의 몸이 너무 많은 여분의 물을 포함할 때 ② 동물의 체액이 바닷물보다 더 짙을 때 ④ 동물이 스펀지처럼 바닷물로부터 물을 흡수할 때 ⑤ 동물의 몸이 충분한 소금을 섭취하지 못할 때

[출제의도] 글의 순서 파악하기

18) [정답] ③

[해설] (A) 문장의 주어는 동명사구 'Distinguishing moths from butterflies on outward appearance'이므로 단수 동사 is가 와야 한다. 따라서 are를 is로 고쳐 써야 한다. (B) 'with + 명사 + 분사' 구문으로, 'wings(날개)'가 '달린' 상태, 즉 수동의 의미이므로 과거분사 held가 와야 한다. 따라서 holding을 held로 고쳐 써야 한다. (E) 'come clothed in'은 '~을 입고 오다' 또는 '~으로 덮여 있다'는 의미의 관용적 표현이다. 문맥상 '갈색과 회색조를 띠는'이라는 의미가 되어야 하므로 clothing을 과거분사 clothed로 고쳐 써야 한다.

[출제의도] 틀린 어법의 개수 파악하기

19) (A) active (B) inactive

[해설] 요약문은 야생 동물 관리가 개입 수준에 따라 두 가지로 분류된다고 설명한다. (A)에는 사냥이나 서식지 변경과 같은 '직접적인 조치(direct actions)'를 포함하는 관리 방식이 들어가야 하는데, 본문에서 이는 'active' management(적극적 관리)로 설명된다. (B)에는 국립공원에서처럼 '인간의 영향력을 제한하는(limiting human influences)' 관리 방식이 들어가야 하는데, 본문에서 이는 'active management'와 대비되는 'inactive' management(소극적 관리)로 설명된다. 본문에서 야생 동물 관리의 두 가지 넓은 범주(two broad categories)로 'active management'와 'inactive management'를 제시하고 있으므로, 빈칸 (A)에는 active, (B)에는 inactive가 적절하다.

[출제의도] 요약문 완성하기

20) [정답] ④

[해설] 폐기가 경제의 필수 동인으로 여겨져 왔으며, 이를 위해 계획적 노후화 등의 전략이 사용되었으나, 폐기를 제거하는 것이 오히려 '서비스로서의 상품'이라는 다른 수요를 창출한다는 내용의 글이다. 제조업체가 인건비를 줄이기 위해 생산을 아웃소싱한다는 내용의 ④는 글의 전체 흐름과 관계가 없다.

[출제의도] 내용과 무관한 문장 파악하기

21) [정답] ①

[해설] 인간은 고정된, 인위적인 시간관을 가지고 있지만, 자연의 시간은 지구의 자전 속도 변화(엘니뇨, 달의 인력 등)로 인해 유연하게 변한다는 내용의 글이다. 밑줄 친 '그것이 굴복할 것이라는 헛된 희망 속에서(in the false hope that it will yield)'는 '그것(it)', 즉 '자연(nature)'이 인간의 '고정된, 인위적인 시간관(fixed, man-made view of time)'에

결국 '굴복할(yield)' 것이라는 잘못된 믿음을 의미한다. 하지만 본문은 바로 뒤에 'It doesn't.(자연은 그렇지 않는다.)'라고 덧붙이며, 오히려 인간이 윤초를 더하는 방식으로 적응해야 함을 보여준다. 따라서 밑줄 친 부분이 의미하는 바로 가장 적절한 것은 ① '자연이 결국 우리의 견고한, 인위적인 시간 체계에 순응할 것이라고 믿기'이다. ② 우리의 인위적인 시간을 더 일관성 있게 만들기 위해 윤초를 추가할 계획을 세우기 ③ 우리의 인위적인 시간관이 수정되어야 할 실수임을 인식하기 ④ 엘니뇨와 같은 자연 현상이 지구의 자전을 방해하는 것을 멈출 수 있기를 희망하기 ⑤ 달의 인력을 기반으로 한 새로운 시간 체계를 만들려고 시도하기

[출제의도] 함축적 의미 파악하기

22) [정답] what they do not

[해설] [조건]에 따라 빈칸을 완성해야 한다. 'the thing which'의 의미를 지니는 관계대명사 what을 포함하여 4단어로 구성해야 하며, 지문에 있는 단어만 사용해야 한다. 빈칸이 포함된 문장은 "움직임은(-----)에 의존하는 만큼이나 근육들이 '하는' 일(what they do)에 의존한다"는 의미이다. 지문 앞부분에서 근육 운동은 수축(contract)과 이완(relax) 즉, '하는' 것과 '하지 않는' 것의 조화라고 설명했으므로, 빈칸에는 'what they do'와 대조되는 '그들이 하지 않는 일'이라는 의미가 들어가야 한다. 따라서 지문에 있는 단어 what, they, do, not을 조합하여 'what they do not'을 완성할 수 있다.

[출제의도] 빈칸 내용 영작하기

23) [정답] ②

[해설] Mason은 무릎 부상에도 불구하고 아픈 이웃 아이 Sam을 위해 마라톤에 참가하기로 결심했으며(he knew he had to try), 이는 '단호한(determined)' 심경을 보여준다. 경기를 마친 후 Sam이 물을 건네주자 그는 '자부심, 안도감, 그리고 감사함(pride, comfort, and thankfulness)'을 느꼈다. 따라서 Mason의 심경 변화로 가장 적절한 것은 ② '단호한 → 자랑스럽고 감사한'이다. ① 무관심한 → 걱정하는 ③ 자신감 있는 → 실망한 ④ 희망적인 → 후회하는 ⑤ 긴장한 → 차분한

[출제의도] 심경 변화 파악하기
